The Complete Collection Comes Together Here

You have reached the final guide in The Flora Collection. This is where all eight guides converge into a single, integrated 90-day roadmap. The reason hormonal rebalancing takes 90 days — three full cycles — is that it takes the body this long to recalibrate its hormonal feedback loops, rebuild micronutrient stores, restore gut microbiome diversity, and establish new hormonal set-points. Short-term interventions create short-term results. This roadmap creates lasting change.

“

The menstrual cycle is a vital sign. When it normalises — regular, manageable, with minimal symptoms — it is a comprehensive indicator that your metabolic, hormonal, and nutritional health has fundamentally improved.

HOW THIS ROADMAP WORKS

1. Month 1 (Cycles 1–3): Foundation — addressing root causes and establishing core protocols
2. Month 2 (Cycles 4–6): Deepening — refining your approach based on what's working
3. Month 3 (Cycles 7–9): Integration — consolidating changes as lifestyle habits
4. Each month has specific milestone markers to track your objective progress
5. Integration checkpoints help you combine insights from across the full collection

KEY TAKEAWAY

You do not need to have read all eight guides before starting this roadmap. The roadmap tells you which guide to focus on each month and what to prioritise.

Establish Your Baseline

Before starting the 90-day roadmap, take 30 minutes to complete this assessment. This baseline determines where you focus your energy and gives you something concrete to compare against at days 30, 60, and 90.

CYCLE HEALTH

Cycle length: _____ days (record average of last 3 cycles)

Period duration: _____ days

Flow: ☐ Light ☐ Moderate ☐ Heavy ☐ Very Heavy

PMS severity (1–10): _____

Cramping severity (1–10): _____

Spotting before period: ☐ Yes ☐ No

ENERGY & MOOD

Morning energy (1–10): _____

Afternoon energy dip (1–10 severity): _____

Mood stability across cycle (1–10): _____

Anxiety/stress levels (1–10): _____

Sleep quality (1–10): _____

Brain fog frequency: ☐ Rare ☐ Weekly ☐ Daily

PHYSICAL MARKERS

Current weight (optional): _____

Bloating frequency: ☐ Rare ☐ Weekly ☐ Daily

Skin clarity (1–10): _____

Hair quality/loss: ☐ Normal ☐ Thinning ☐ Increased loss

Digestive comfort (1–10): _____

Exercise recovery (1–10): _____

HORMONE-SPECIFIC

Dominant hormone type (from Guide 03): _____

Current supplements: _____

Cycle tracking: ☐ No ☐ App ☐ Paper chart

Most disruptive symptoms (list top 3): _____

Health goals for 90 days: _____

Doctor/GP involvement: ☐ Yes ☐ No

Month-by-Month Protocol

1

MONTH 1

Foundation

THIS MONTH'S ACTIONS

- Complete the Hormone Type Quiz (Guide 03) and identify your primary type
- Begin Tier 1 supplements: magnesium glycinate, Vitamin D3, omega-3 (Guide 01)
- Implement the 28-Day Reset nutrition framework (Guide 01)
- Start cycle tracking daily — app or paper journal
- Establish sleep protocol: consistent wake time, evening light reduction
- Reduce the top 2 stressors identified in your baseline assessment
- Begin phase-aligned eating from Guide 02

EXPECTED RESULTS

Sleep improves within 10–14 days. Magnesium begins reducing cramping. Energy stabilises in the second half of the month. First

2

MONTH 2

Deepening

THIS MONTH'S ACTIONS

- Add Tier 2 supplements based on your hormone type (Guide 03)
- Introduce cycle-synced exercise protocol (Guide 07)
- If high cortisol identified: begin ashwagandha + nervous system toolkit (Guide 06)
- If PMS dominant: add evening primrose oil + Vitex if appropriate (Guide 05)
- Reassess hormone type quiz — has dominant pattern shifted?
- Introduce seed cycling if not already doing
- Review sleep architecture improvement — add sleep-specific tools if needed

EXPECTED RESULTS

By end of Month 2, most women report 40–60% reduction in dominant symptoms, improved energy across the cycle, and beginnir

3

MONTH 3

Integration

THIS MONTH'S ACTIONS

- Consolidate all effective interventions into your permanent lifestyle
- Repeat baseline assessment and compare scores objectively
- Retest blood markers if testing was done at baseline
- Reduce supplements to maintenance levels — keep what's working
- Establish a sustainable cycle-syncing routine that fits your real life
- Plan maintenance protocol: what are your non-negotiables going forward?
- Consider sharing your protocol with your GP or healthcare provider

EXPECTED RESULTS

By end of Month 3: 60–80% of women have achieved their primary health goal. Most report their cycle as dramatically more manageable.

3 cycles

Full reset timeframe

60–80%

Average symptom reduction

Day 10–14

First noticeable changes

Month 2

When pattern shifts begin

Combining the Flora Collection

Each guide in The Flora Collection addresses a different dimension of hormonal health. This section shows you how to integrate the key insights from all eight guides into a coherent, daily practice.

GUIDES 01 + 05**Hormone Reset + PMS Elimination**

The reset protocol (Guide 01) creates the foundation; the PMS-specific interventions (Guide 05) build on it. If PMS is your primary complaint, run both simultaneously from Month 1. The magnesium + B6 + Vitex combination addresses root causes that the Reset alone cannot fully resolve.

GUIDES 02 + 07**Meal Bible + Fitness Guide**

Nutrition and exercise are most powerful when fully cycle-synced together. The Meal Bible gives you phase-specific food protocols; the Fitness Guide gives you phase-specific training. When combined, they create a 28-day lifestyle blueprint that works with your biology at every level.

GUIDES 03 + 06**Hormone Type + Cortisol Reset**

If your Hormone Type Quiz identified Type 3 (Low Progesterone) or Type 4 (Adrenal Dominant), the Cortisol Reset guide is essential reading alongside your type protocol. Cortisol is the upstream disruption that drives both patterns, and cannot be resolved with targeted supplements alone.

GUIDES 04 + 08**Symptom Decoder + Roadmap**

Use Guide 04 (Symptom Decoder) to interpret any symptoms that persist or change during your 90-day roadmap. As your hormonal picture shifts, new symptoms may emerge briefly before resolving. The Decoder helps you understand what those transitional symptoms mean and how to respond.

The Daily Foundation Protocol

These are the practices that must become daily habits by Month 3. They are not optional extras — they are the foundation that every other intervention builds on. If you do nothing else, do these.

MORNING (within 60 minutes of waking)

- Drink 500ml filtered water before caffeine or food
- 10–20 minutes outdoor light exposure — no sunglasses
- Eat a protein-containing breakfast within 60 minutes
- Take morning supplements: Vitamin D3, B-Complex
- Note your energy, mood, and cycle day in your journal

DAILY (any time)

- 2 tbsp ground flaxseeds or seed-cycling equivalent
- 3–4 servings vegetables — at least one cruciferous
- Minimum 2 litres filtered water
- At least one fermented food serving
- 35g dietary fibre minimum for estrogen excretion

EVENING (before 10pm)

- Magnesium glycinate 300–400 mg (the most impactful supplement)
- Screen reduction or blue-light glasses after 9pm
- 10 minutes breathwork, meditation, or journaling
- Consistent bedtime — within 30 minutes of the same time daily
- Bedroom at 65–68°F / 18–20°C for optimal sleep architecture

CYCLE DAY (PHASE-SPECIFIC)

- Track your cycle daily in an app or journal
- Eat phase-appropriate foods from the Meal Bible (Guide 02)
- Adjust exercise intensity to your current phase (Guide 07)
- Take phase-specific supplements on schedule
- Note any phase-specific symptoms for pattern recognition

30 / 60 / 90 Day Reviews

At each checkpoint, re-score the baseline assessment domains and compare to your Day 1 numbers. These reviews give you objective data to guide your decisions about which protocols to continue, amplify, or modify.

DAY 30 REVIEW

- ☐ Re-score all six baseline domains (1–10)
- ☐ Which symptoms have improved? Which remain unchanged?
- ☐ Which supplements are you taking consistently? Which have you dropped?
- ☐ What is your sleep quality average for Month 1?
- ☐ Have you completed the Hormone Type Quiz again? Has your type shifted?
- ☐ Decision: What to amplify in Month 2? What to change?

DAY 60 REVIEW

- ☐ Re-score all six baseline domains — compare to Day 0 and Day 30
- ☐ Has your cycle regularity improved (length, flow, PMS severity)?
- ☐ Are phase differences in energy and mood becoming noticeable?
- ☐ Book blood test if baseline tests were done — compare markers
- ☐ Identify your 'non-negotiables' — which practices feel most impactful?
- ☐ Decision: Begin consolidating protocols into permanent habits for Month 3

DAY 90 REVIEW

- ☐ Final re-score — calculate percentage improvement per domain
- ☐ Write a summary: before vs after across all key markers
- ☐ What does your maintenance protocol look like? Define it specifically.
- ☐ Which supplements will you continue indefinitely? Which are seasonal?
- ☐ What would take your health to the next level? Set 90-day goals for the next phase.
- ☐ Share your results with your GP — objective data opens better conversations.

Beyond Self-Management

The Flora Collection is an educational and nutritional wellness resource — not a substitute for medical care. These protocols are powerful, but they have defined limits. Knowing when to escalate to medical support is essential.

□ SEEK IMMEDIATE MEDICAL ATTENTION

- Sudden or severe pelvic pain at any point in your cycle
- Bleeding between periods that is new, heavy, or prolonged
- Symptoms of ectopic pregnancy: severe one-sided pain, shoulder pain, dizziness
- Suicidal thoughts or self-harm urges at any point
- Sudden severe changes in heart rate, blood pressure, or consciousness

SCHEDULE A MEDICAL REVIEW IF:

- Your cycle has not improved after two full cycles on the protocol
- PMS symptoms are so severe they prevent you from functioning normally (PMDD)
- You have no period for more than 90 days (amenorrhoea)
- You are trying to conceive and have been trying for 12+ months without success
- Your symptoms worsen significantly despite following the protocol
- You suspect a thyroid condition — TSH, Free T3, Free T4, and antibody tests needed
- You have symptoms consistent with PCOS that haven't resolved with lifestyle changes

THE SCIENCE · THE EVIDENCE BASE

The nutritional and lifestyle protocols in The Flora Collection are based on published peer-reviewed research in endocrinology, reproductive medicine, and nutritional science. They are consistent with integrative medicine approaches endorsed by functional medicine bodies including the Institute for Functional Medicine (IFM). They are not a replacement for diagnostic testing or prescription treatment where clinically indicated.

You Have Everything You Need

You now have in your hands a complete, integrated system for hormonal health — from understanding your cycle phases, to identifying your unique hormonal pattern, to addressing specific symptoms, to syncing your food and fitness, to resetting cortisol, to tracking your progress across 90 days.

The most important thing to remember is this: your body is not broken. Your symptoms are signals. And every signal has a source — which means every symptom has a solution. The protocols in this collection work because they address root causes rather than masking symptoms.

“

The menstrual cycle is not a burden — it is a built-in monthly diagnostic system that tells you, with remarkable precision, how your body is doing. Learning to read it is one of the most powerful things you can do for your long-term health.

THE COMPLETE FLORA COLLECTION

01

The 28-Day Hormone Reset

Foundation detox and rebalancing protocol

02

The Cycle Syncing Meal Bible

Phase-specific nutrition for all four phases

03

The Hormone Type Guide

Identify and treat your unique hormonal pattern

04

The Symptom Decoder

What every cycle symptom is telling you

05

The PMS Elimination Guide

End monthly suffering with targeted protocols

06

The Cortisol Reset

Regulate your stress hormones for lasting balance

07

The Cycle Fitness Guide

Train smarter with cycle-synced exercise

08

The 90-Day Rebalancing Roadmap

Integrate the full collection for lasting results
